

Polaris Capital: Portfolio Overview (Internal)

Polaris Capital is a venture capital firm headquartered in Boston, Massachusetts. The firm was founded in 2009 by managing partner Daniel Roth. Polaris invests across enterprise software, energy infrastructure, and industrial automation. The firm closed its second flagship fund, Polaris II, at 500 million dollars in 2023, and allocates roughly a third of the fund to early stage infrastructure companies.

Partner Sarah Kim joined Polaris in 2013 and leads the firm's enterprise infrastructure practice. Kim represents Polaris on the board of Vertex Energy and holds an observer seat at Helix Robotics. In internal correspondence, Kim has described the portfolio's thesis as backing companies that form the physical backbone of the AI economy: energy storage, robotics, and logistics.

The Polaris portfolio includes three companies of note. Vertex Energy, a grid-scale battery provider led by chief executive officer Amara Okafor, raised a 300 million dollar Series D round in 2025 with Polaris Capital as lead investor. Helix Robotics, a Toronto-based autonomous warehouse robotics company, raised a 45 million dollar Series B round in 2021 with Polaris as the lead investor. Northwind Logistics, a freight and fulfillment operator based in Atlanta, raised a 20 million dollar Series A round in 2022 with Polaris as the lead investor. Northwind began deploying Helix Robotics' Helios units in its regional distribution centers in 2025, an example of the synergies the firm encourages across its portfolio companies.

Polaris typically takes board seats in companies where it leads rounds and observes in earlier-stage positions. The firm is headquartered in Boston but maintains advisory offices in New York and San Francisco. Polaris does not disclose management fees, though partners have noted the firm targets fund sizes that allow concentrated positions in its highest-conviction companies. The firm plans to begin marketing Polaris III in 2027 with a target of 700 million dollars.
